

Relief from discomfort. Relief from weakened teeth

That's enough to make anyone smile.

Dry mouth, sensitivity, erosion and worn enamel – these symptoms can leave your mouth uncomfortable and your teeth at risk. Good news: **GC Europe** offers you three superb products to restore comfort and keep your teeth protected, 24 hours a day.

If you've ever complained of

- dry mouth
- difficulty in swallowing or speaking
- a bad taste or bad breath

or noticed

- craters or plaque forming on your tongue
- plaque building up more quickly
- extremely sensitive teeth
- an increased rate of caries or erosion

your saliva is likely to be the culprit. If it doesn't contain the right balance of minerals, saliva can't protect your teeth the way it should. A reduced flow of saliva won't keep your mouth pleasantly moist or allow your taste buds to do their job.

GC Europe can help – with Dry Mouth Gel, Tooth Mousse and MI Paste Plus. Each designed with your symptoms in mind, these products keep your mouth and teeth comfortable and protected – day after day after day.

Make a wonderful smile feel wonderful – with added **GC** protection.

Dry Mouth Gel, Tooth Mousse and **MI Paste Plus** make smiling comfortable again. And they help keep your teeth and mouth healthy. But they're only available through your dentist. Ask your dentist for details of which one is right for you.

CPP-ACP was developed at the School of Dental Science, University of Melbourne Victoria / Australia. RECALDENT™ is used under licence from Recaldent™ Pty. Limited. RECALDENT™ CPP-ACP is derived from milk casein, and should not be used on patients with milk protein and/or hydroxybenzoates allergies.

GC Dry Mouth Gel

During the day for comfort, easing the symptoms of oral dryness.

A soothing, sugar-free, surge in moisture

Sometimes you don't know your mouth is dry until it hurts. Tea and coffee, alcohol and nicotine can dry out your mouth. Patients undergoing prolonged medical treatments or those undergoing chemotherapy/radiotherapy are particularly prone to dry mouths. You can't always change what your saliva does.

Dry Mouth Gel from **GC** has a neutral pH, unlike many other saliva substitutes. This means **Dry Mouth Gel** restores comfort but still maintains a safe oral pH in your mouth, so your teeth won't lose precious minerals.

Dry Mouth Gel is made to fit your life:

- four delicious flavours to choose from
- sugar-free so it won't harm your teeth
- is applied as a discreet transparent gel
- comes in a compact tube to fit into your bag or pocket

GC Tooth Mousse and GC MI Paste Plus

For night time protection boosting the levels of bio-available calcium, phosphate and fluoride ions needed for remineralisation and prevention.

A winning combination for the perfect smile

Why are my teeth sensitive? Why are my teeth wearing away?

Just like your body, your teeth need conditioning to stay healthy and look their best. Over time, teeth can weaken and lose nutrients. The result can be sensitive teeth that don't have enough enamel and that are at greater risk of developing cavities.

How can I prevent sensitivity and tooth wear?

Revitalise your teeth and give them protection that lasts. **Tooth Mousse** and **MI Paste Plus** keep your smile looking terrific. In fact, they're the first natural system to protect your teeth against acid attacks from your daily diet – and they counteract the effect of dental erosion and tooth wear too.

How do GC Tooth Mousse and GC MI Paste Plus work?

Tooth Mousse and **MI Paste Plus** are ideal for at-home use. Simply apply them to any at-risk surfaces immediately before going to bed, and let the paste do the rest. **Tooth Mousse** and **MI Paste Plus**:

- help to neutralise the pH in your mouth
- prevent enamel from eroding
- keep your mouth healthy and ward off decay
- rapidly "desensitise" teeth

The flavour helps stimulate saliva flow, which rinses bacteria and food residues from the teeth and enhances the effectiveness of CPP-ACP(F). The longer CPP-ACP(F) is in the mouth, the more effective the result.

What's more, **Tooth Mousse** and **MI Paste Plus** are extremely effective at restoring minerals to eroded areas and where your enamel is thinner. **MI Paste Plus** even delivers fluoride to tooth enamel rejuvenating your smile whilst making your teeth stronger in the process. Ask your dentist which product is right for you.

Tooth Mousse and **MI Paste Plus** contain ingredients derived from milk casein. Patients who have a milk protein and/or hydroxybenzoates allergy should consult their dentist about alternatives.
