Let’s Join Forces!

Smart solutions from GC for all your luting challenges
How to choose the optimal luting cement?

Today more than ever you are spoilt for choice when planning and delivering indirect restoration. From the moment your patient comes in, you have much to consider before deciding on the treatment plan.

As a dentist you know that no two patients are alike and it is therefore important to follow a holistic approach in treatment planning considering the choice of indirect restoration and type of preparation which is best suited to the patient’s clinical situation.

An important part of this process is choosing the right luting cement

The key questions you should ask before making the final choice are:

Which is the optimal luting cement to help me

Protect the tooth structure?

Protect the prosthetic restoration?

The selection of the optimal luting cement is the guarantee for a beautiful smile and long-term patient satisfaction.
Discover our High 5 solutions for all your luting challenges

With more than 95 years of experience and one of the most comprehensive product portfolios, we at GC believe we are the ideal partner to guide you towards the most appropriate luting solution.

Because after all, efficient luting is a team effort.

Each of the GC luting solution is suited to different clinical situations and offers you their unique features like physical properties, working time, protocol of use, fluoride release and cost...

Let’s Join Forces!

Download the GC Luting Guide
Depending on the clinical situation, the first question you should ask yourself is: Should I CEMENT or BOND?

When to cement?

Cementation is typically used when your preparations allow mechanical retention. The following clinical aspects will define your choice for the optimal CEMENTATION procedure:

- **Retentive Preparation**
  - Select GI & RMGI cement that offers the best balance of ease of use, speed and tooth protection.

- **Isolation not possible**
  - Select GI or RMGI cement as they offer moisture tolerance with excellent chemical adhesion to the tooth.

- **Moderate aesthetics needed**
  - Select GI or RMGI cement when your clinical situation and/or selected substrate (zirconia, metal & porcelain fused to metal) does not require a very high aesthetic cement.

- **Patients with special needs**
  - Select GI or RMGI cement for high caries risk and geriatric patients.

Your options

**Conventional glass ionomer (GI) cement** | **GC’s solution:** Fuji I

**Resin-modified glass ionomer (RMGI) cement** | **GC’s solutions:** Fuji PLUS, FujiCEM 2 and FujiCEM Evolve.

Source: Dr Lucile Dahan, France (1) and Prof Jean-François Lasserre, France (2, 3 and 4)

“Most of the time the margins of the preparation are subgingival and total control of humidity proves to be difficult!”

DR LUCILE DAHAN, FRANCE
When to bond?

Bonding is typically used when extra adhesion is required or when aesthetics are of the utmost importance.

<table>

Fuji I
Conventional Glass Ionomer cement

The biocompatible, resin-free luting solution with 25 years of great clinical success.
Fuji I, GC’s first luting GI cement, is widely used across the world. Discover why Fuji I is still a material of choice.

Key clinical advantages
• Chemical adhesion to tooth structure, ensuring an excellent marginal seal
• Moisture-tolerant solution when a dry field cannot be assured
• Quick and easy without the need for etching and bonding steps of the tooth
• Resin-free cement for patients allergic to methacrylate (resin)
• Virtually no post-operative sensitivity: a pulp friendly solution

Practical advantages
• Cost efficient and easy-to-use solution for metal-based-restorations
• Economic consideration: €

Shade range

“Fuji I is perfectly indicated for the permanent cementation of fixed elements on implant abutments. The removal of excess is simple and easy to control, thereby reducing the risk of peri-implantitis.”

DR EMMANUEL D’INCAU, FRANCE

Source: Dr Emmanuel d’Incau, France
Fuji PLUS
Resin-Modified Glass Ionomer cement

Efficient and proven over 20 years - a predictable, worry-free solution.
Fuji PLUS is one of the most well-known products and it is considered a benchmark material in its class, offering the tooth protection of a glass ionomer cement balanced with the strength and aesthetics of a resin cement.

Key clinical advantages
- Chemical adhesion to tooth structure, ensuring an excellent marginal seal
- Moisture-tolerant solution when a dry field cannot be assured
- Quick and easy: no need for etching and bonding of the tooth
- Rubbery consistency for easy removal of excess
- Virtually no post-operative sensitivity: a pulp friendly solution

Practical advantages
- Proven and predictable performance for most routine cases
- Available in different shades
- Also available in extended working time (EWT) version for long-span bridges
- Economic consideration: €€€€€

Shade range
- Powder/Liquid: A3, Yellow, Translucent
- Capsules: A3, Yellow

“Our office has been using Fuji Plus for almost 2 decades. I don’t remember any failure yet and we have cemented more than 5000 crowns & bridges!”

DR HAN HEESEN, NETHERLANDS

* Feldspathic & leucite-reinforced ceramics
FujiCEM® 2 SL / FujiCEM™ Evolve
Resin-Modified Glass Ionomer cement

Simplicity is innovation!
The resin-modified glass ionomer cement in paste-paste delivery form. This easy-to-use and versatile luting cement is your perfect partner for most of your routine cementation.

Key clinical advantages
• Chemical adhesion to tooth structure, ensuring an excellent marginal seal
• Moisture-tolerant: a “must-have” when moisture control cannot be guaranteed
• Quick and easy: no need for etching and bonding of the tooth
• Rubbery consistency for easy removal of excess, with tack-cure option for FujiCEM Evolve
• Virtually no post-operative sensitivity: a pulp friendly solution
• Strong bonding to restorative, mainly Zirconia for FujiCEM Evolve

Practical advantages
• Choose from handmix or automix: the choice is yours!
• Economic consideration: €€€€€

Shade range
• FujiCEM 2 SL: Light yellow
• FujiCEM Evolve: Universal

“FujiCEM Evolve is a very user-friendly luting agent, combining ease of use, moisture tolerance and versatility. It is ideal to cement both zirconia and metal-ceramic restorations, particularly in the presence of iuxta- and sub-gingival margins. Furthermore, cement excess removal is extremely easy and safe and field isolation is not mandatory. A smart material to make cementation procedures easier and quicker.”

PROF ROBERTO SORRENTINO, ITALY

* Feldspathic & leucite-reinforced ceramics
Looking for the best results even when light cannot pass through the restoration?
Choose our G-CEM LinkAce featuring highly efficient self-cure for predictable results every time! Thanks to its unique initiator and filler particles, it offers reliable bonding, long-term colour stability and high wear resistance.

Key clinical advantages
- Efficient self-cure mode guarantees optimal polymerization even under opaque or thick restorations
- No pre-treatment of tooth or application of primers for metal or zirconia
- Thin film thickness (3µm) ensures an excellent fit of the prosthesis
- Excellent colour stability for long-lasting aesthetic results

Practical advantages
- Easy-to-use resin cement, fulfilling most of your daily aesthetic challenges
- Refrigeration not needed, store at room temperature
- Economic consideration: €€€€€

Shade range
- A2, Translucent, AO3, BO1

“I use this cement most of the time for zirconia and ceramic restorations. I particularly love the fact that it is a dual-cure material with an excellent self-cure feature, ensuring high polymerisation even when transmission of light is limited. The material also offers aesthetic results and is easy to use!”

DR ANJA BARABA, CROATIA

* Feldspathic & leucite-reinforced ceramics
**G-CEM LinkForce™**

**Dual-cure adhesive resin cement**

**Strength and aesthetics in one system for all indications, all substrates.**

G-CEM LinkForce is the universal adhesive resin cement that is ideal to use whenever additional retention is needed and a must-have for all CAD/CAM ceramic and hybrid ceramic blocks such as CERASMART270.

**Key clinical advantages**

- Secure adhesion in all situations with **only one system**, three base elements:
  - G-Premio BOND bonds to ALL Preparations with no compromises
  - G-Multi Primer ensures a stable adhesion to ALL Restorations
  - G-CEM LinkForce provides a strong link in ALL Indications

- Optimal light-curing feature for veneer indications

- Efficient **self-cure mode**, useful for luting more opaque or thick restorations

**Practical advantages**

- Optional use of G-Premio BOND Dual-Cure Activator for post luting

- The universal, aesthetic and powerful solution to all your adhesive cementation challenges

- Choice of **four aesthetic shades** and their corresponding **try-in pastes**

- Economic consideration: €€€€€

**Shade range**

- A2, Translucent, Bleach, Opaque

**Clinical applications**

- **Inlays / onlays**
- **Crowns / bridges**
- **Veneers**
- **Posts/ inlay-cores**

“**I use G-CEM LinkForce as a first choice in all clinical indications. Day after day it still surprises me.”**

**DR CASTI, ITALY**

* Feldspathic & leucite-reinforced ceramics
## G-CEM™ Veneer

**Light-cure adhesive resin cement**

G-CEM Veneer: a light-cure resin cement for high aesthetic demand with easy placement featuring Full-coverage Silane Coating (FSC) technology.

### Key clinical advantages
- **Thixotropic consistency** for easy placement of veneers and easy excess removal.
- Superior performance thanks to high filler rate of 69% (w/w): high wear resistance, high bond and flexural strength for long-term aesthetics.
- The alternative to heated composites with less risk of failures for thin indirect restorations.

### Practical advantages
- Easy to use and universal system with G-Premio BOND and G-Multi PRIMER.
- 4 aesthetic shades matching all cases, with G-CEM Try-in pastes.
- Ergonomic syringe.
- Economic consideration: €€€€€

### Shade range
- A2, Translucent, Bleach, Opaque

"To me, G-CEM Veneer kit seems to be particularly suited for the modern luting challenges linked to minimally invasive ceramic restorations. It demonstrates a good flowability, while keeping a high viscosity in order to maintain good marginal sealing ability before polymerisation."

PROF JEAN-FRANCOIS LASSERRE, FRANCE

* Feldspathic, leucite-reinforced ceramics and lithium disilicate

GC’s temporary cements...

**FREEGENOL**
Zinc oxide cement

**Key features**
- All-purpose temporary solution
- Adjustable consistency and setting times
- Easy removal of excess
- Eugenol free, avoid interaction with resin cements

**Fuji TEMP LT™**
Conventional glass ionomer cement in Paste-pak cartridge

**Key features**
- Assured retention and easy removal
- Easy seating thanks to low film thickness (6μm)
- Rubbery consistency for easy removal of excess
- Radiopaque
- Ideal for cementation on implant abutments

Also discover GC’s Primers...
Whether you prefer a specialised or a universal primer, GC has a solution.

**Universal solution**
G-Multi PRIMER
One universal primer for ALL your indirect restorations.

**Specialised solutions**
CERAMIC PRIMER II
A specialised primer for all aesthetic indirect restorations. Compatible with glass-ceramic, hybrid ceramic, zirconia, alumina and composite restorations.

METAL PRIMER Z
The hero for all your metal and porcelain fused to metal restorations.

Let’s Join Forces! Discover our key luting solutions for all your luting challenges

FujiCEM 2 SL, FujiCEM Evolve & Fuji PLUS
Resin-modified glass ionomer cement
Proven to be a benchmark in their class. They also are ideal worry-free solutions for your routine procedures, especially for metal, porcelain fused to metal & zirconia. They are your ‘must-haves’, especially when moisture control becomes a challenge!

| 1 | Perfect solution for subgingival margins! |
| 2 | Easy dispensing |
| 3 | Easy removal of excess |
| 4 | Full protection for the tooth |

G-CEM LinkAce
Self-adhesive resin cement
With probably the best self-curing ability in its class, excellent polymerisation is assured, even when light transmission through the restoration is limited.

| 1 | Can be stored at room temperature |
| 2 | No need for etching and bonding of the tooth |
| 3 | Efficient self-cure mode for optimal polymerisation even when light transmission is limited |
| 4 | Aesthetic results in time |

G-CEM LinkForce & G-CEM Veneer
Adhesive resin cement
When uncompromised adhesion is needed, this product is THE solution. This universal adhesive resin cement allows you to work in a standardised way and offers a strong bond in all indications.

| 1 | Easy application of G-Premio BOND |
| 2 | Light-curing of the thin bonding layer for optimal adhesion |
| 3 | Universal Primer for stable adhesion to all substrates |
| 4 | Easy seating and perfect adaption |
