Clinic, University of Milan, Italy.

DDS **Arturo Dian**
Centre of Minimally Invasive, Aesthetic and
Digital Oral Rehabilitation (CROMED), IRCCS
Galeazzi Orthopaedic Institute, Dental
Clinic, University of Milan, Italy.

CAD-CAM single tooth lithium-disilicate restoration through combined endodontic, surgical and prosthetic therapies

By Matteo Basso, Maria Giulia Pulcini,
Carlo Vitelli, Arturo Dian, Katherine Radaelli
and Clotilde Austoni, Italy.

The restorative treatment of a severely decayed, unvital tooth requires often an interdisciplinary approach, and the aesthetic and the entity of the masticatory loads are often influencing the choice of procedures and materials. A case of a 45-year-old woman, with an incompletely treated, painful upper premolar is here presented, where the aesthetic needs and functional requirements led the clinician to choose a surgical and prosthetic rehabilitative path, selecting a lithium-disilicate, monolithic block as ideal material for the final restoration.

DDS, MSc student **Katherine Radaelli**
