- Member of AEDE (Spanish Society of Endodontics)
- Private practice with focus on Endodontics, Aesthetics and Restorative Dentistry

How to maintain comfort and function after implant placement in denture wearers?

The use of a silicone soft relining material as a patient-friendly solution

By **Dr David Garcia-Baeza**
and **Dr Olga González**, Madrid, Spain

Tooth extractions and implant placements have become common procedures in dental practice. Handling the changes that occur during the healing process in denture wearers remains however often a challenge. This article describes a possible option using a silicone soft lining material, further illustrated by a step by step clinical case.
